---

Good morning,

I'm a journalist at VICE Motherboard. I have something important to ask you.

A group of hackers has provided me with a large dataset that they claim they exfiltrated from NASA networks, in particular, those of the Glenn Research Center, the Goddard Space Flight Center and the Dryden Flight Research Center.

The hackers say they had access to these networks for months last year, and have downloaded more than 250GB of data, including video and data logs from UAV flights. The hackers have provided me with a copy of the data, and plan to publish it online shortly.

The data at first glance appears to be legitimate, but I wonder if you can confirm to be that there was a breach. I'm attaching a sample drone flight data log for you to review.

Please let me know if you have any information about this alleged data breach,
